

WEB APPLICATION SERVICES

Web Application Services (WAS) refers to the array of skills, tools, and expertise that enables businesses to make their information systems available over the Internet. That can mean different things to different organizations — linking mainframe or other legacy systems to a Web interface for access by user groups, or creating the right design and system architecture to optimize response times, or crafting interfaces that the user can understand intuitively and navigate through efficiently.

Stratagem's WAS professionals work with clients in many industries. We help them understand their options for harnessing the Internet to improve business performance and increase partner satisfaction. We then build the systems, from iterative prototyping and careful design work, through skilled development and implementation. The result is

Services

WAS Services

- System architecture and design
- Full complement of Java/.Net/open source skills
- Related requirements-gathering and business analysis expertise
- Customer interface and usability testing
- Content management solution

Benefits

- Take advantage of new delivery channels
- Make applications available worldwide, 24x7
- Eliminate installation of software on the client platform
- Ensure real-time, up-to-date information access for everyone
- Give clients access to legacy systems via the Web

Experience

e-Courseware Keeps Global Employee Base in Compliance

Stratagem provided an international manufacturer with internal global training solutions on critical US trade regulations. The Web-based programs, optimized for translation into five languages, sharply reduces training costs and minimizes the risk of expensive non-compliance fines.

Crisis-management database aids response to disaster, terrorism

The September 11, 2001 terrorist attacks spurred the government-ordered roll-out of a Web-based report system for a crisis-management client. Stratagem's .NET skills help the client collect and record critical disaster-related information.

Moving purchasing on-line saves time and money

Stratagem created a Web-based database for a group purchasing organization that can handle 300,000 price-tiered products. The secured website offers on-line, real-time access to a catalog of purchasing agreements and product prices. Members get a customized view of the information.
